

— GTM ENGINEER • DATA & AUTOMATION

I build GTM systems *that run themselves.*

Collection, enrichment, customer-overlap detection, LLM classification, and live outbound — built as **autonomous systems**, not one-off scripts. Each one backed by a real artifact: a log, a verdict, an export.

**Hunt-d** 5:24 PM

The agent recognises companies using **Rippling** really well — a big chunk in the 1–100 range. So we can do **Rippling, Gusto, Deel** & all other PEOs in one place now. Gonna be great!

**Hayk G.** 1:36 AM

Amazing

1

↩ spotted the PEO pattern unprompted

hunt-d-hyperbound

3 people from Hyperbound

**Hunt-d** 1:57 PM

This contains everything you asked for, **[REDACTED]** — the **B2B-SaaS** and **med-device** target lists. We can pull a lot more if we loosen the employee-count filter.

b2b-saas-list.csv

CSV

med-device-list.csv

CSV

**Isaac H.** 5:45 PM

Yes let's do that thank you

1

↩ two target lists, one thread

hunt-d-peecai

3 people from Peec AI

**Hunt-d** 12:59 PM

Scoped your **ICP** and built the prioritised target-account list. Want me to prioritise any segment first?

**Daniel D.** 3:53 PM

Nice! I'd prioritise B2B over consumer. SaaS is always easiest to close!

↩ ICP scoped, list prioritised

PARTHA

LinkedIn Campaign Autopilot

Drop a doc, say “go,” and LinkedIn campaigns go live.

An OpenCLAW agent (Claude Agent SDK) that **recreates the Aimfox API** to run LinkedIn outreach end to end. **Phase 1** extracts copy from a `.docx`, builds templated messages, and pulls matching leads from MongoDB. **Human approval gate**. **Phase 2** runs a 10-step pipeline per campaign — create → target → resolve audience → match template → preview → schedule → **activate** — across separate workspaces per account, with a daily cron health-check.

~100 campaigns live / doc → live in ~6 min / 2-phase + approval gate

```
partha • run klaviyo-outreach.docx

user > create a LinkedIn campaign for this [+ klaviyo-outreach.docx]

🔒 workspace confirm: account=<workspace> campaign=Klaviyo-PMM-Leads leads=39 proceed? yes

[phase 1] extracting copy → building templates
[phase 1] ✅ klaviyo_normal {{FIRST_NAME}}, {{CURRENT_COMPANY}}
[phase 1] ✅ klaviyo_ken_emma {{FIRST_NAME}}, {{CURRENT_COMPANY}}
[phase 1] ✅ klaviyo_deja_mary {{FIRST_NAME}}, {{CURRENT_COMPANY}}
[phase 1] querying MongoDB salesnav → 39 leads w/ LinkedIn URLs
[phase 1] ✅ csv: normal=35 • ken_emma=2 • deja_mary=2 ⌚ 1m32s

user > approved

[phase 2] Klaviyo-Normal-10-02-2026
[1/10] create campaign ✅ [4/10] audience resolved ✅ 35 profiles
[7/10] preview "{{FIRST_NAME}} - {{TITLE}}" → "Hi {{FIRST_NAME}}, noticed {{COMPANY}}'s..." ✅
[10/10] activate ✅ ACTIVE
[phase 2] ✅ 3 campaigns • 39 leads LIVE ⌚ 4m12s
```

► evidence — representative end-to-end run: doc in, 3 campaigns live

► evidence — the live Aimfox workspace: campaigns activated by Partha, 100% complete (account redacted)

CUSTOMER OVERLAP

Customer-Overlap Detection Engine

“Does this prospect already use the product?” — at the email level.

Outbound burns budget on companies that already use a tool. I built a **reusable headless-automation engine** that drives a target's own signup flow and reads the “email already registered / SSO redirect” signal — then **productized it across 10+ SaaS targets** (Klaviyo, TaxJar, Harness, SimilarWeb, BuiltWith, GitLab, Dynatrace, Bluefish, Second Nature, etc.). Stealth browsers, residential proxies, AI & 2captcha CAPTCHA solving, MongoDB job queues, and a **parallel worker pool** behind Express batch APIs with polling and 3× retries.

10+ production checkers / parallel worker pool / CAPTCHA-solving + retry

```
● ● ● overlap-engine/batch.log — target: Klaviyo · 4 workers
```

```
[init] driving each prospect through signup → reading "already registered" signal
```

```
[w1] m****@acme.com      → registered ✓ 1.9s | hits 1/200
[w2] s****@globex.io    → new prospect 2.3s | hits 1/200
[w3] d****@initech.com  → registered ✓ 2.1s | hits 2/200
[w4] r****@umbrella.co  → new prospect 1.8s | hits 2/200
[w1] k****@hooli.com    → registered ✓ 2.4s | hits 3/200
[w2] j****@stark.io     → new prospect 2.0s | hits 3/200
— summary: 14 / 200 already customers → excluded from outbound ⌚ 3m02s
```

► **evidence** — live batch: 4 workers detecting existing customers across 200 prospects (emails masked)

CLASSIFIER

B2B / SaaS Classifier

Turning noisy Apollo exports into a clean, targetable universe.

Raw exports are full of agencies, holding companies and B2C noise. I built a pipeline that **scrapes each company's website, reads it with an LLM, and classifies it** as B2B / SaaS or not — with a scrape cache, automatic failure re-queue, resumable batch progress, and verified audit CSVs so every verdict is traceable.

13,700 companies / run / resumable · auto-retry / 280K+ rows processed

```
run-classifier.log

$ npm start -- --input companies.csv --output ./out

=== SaaS B2B Classifier Pipeline ===
[CONFIG] azure: gpt-5-mini · batch:50 · max-concurrent:10
[CSV] parsed → valid companies w/ websites: 13,700 (skipped 1,249)
[PROGRESS] loaded: batch 15/274 · resuming 16/274 · Apollo OK
[CLASSIFIER] SUCCESS "Trinseo": b2b=true, b2b_saas=false, confidence=high
[CLASSIFIER] SUCCESS "IREKS Group": b2b=true, b2b_saas=false, confidence=high
[OUTPUT] wrote 800 rows → ./out/final.csv
```

► evidence — real run log: 13,700 companies parsed, resumed at batch 16 of 274

ENRICHMENT

Apollo × LeadMagic Enrichment Pipeline

Verified emails in, duplicate outreach out.

An interactive pipeline that builds clean outbound lists from Apollo search: a **multi-provider email waterfall** (Apollo People-Match → LeadMagic fallback), domain-to-search-list conversion, rate-limited paginated calls, and **MongoDB de-duplication against prior sources** so a known contact is never messaged twice. Every row carries its provenance — see the `email_source` column.

dual-provider fallback / 70K+ contacts exported / ~5.7K LOC

enriched_search_2026-04-23.csv				2,501 rows · 14 cols	
NAME	EMAIL	STATUS	EMAIL_SOURCE	TITLE	COMPANY
Josh Beren	jberen@cisco.com	verified	apollo_original	Dir, Technical Sales Prod.	Cisco
Kathleen Tilly	ktilly@salesforce.com	verified	leadmagic	Sr Dir, Revenue Enablement	Salesforce
Florian Haerle	— not found —	verified	not_found	Head of Digital Enablement	Boehringer
Sophie Whelton	swhelton@salesforce.com	verified	leadmagic	Productivity Mgr, UKI	Salesforce

► **evidence** — real, verifiable export: the email_source column shows the Apollo→LeadMagic waterfall

EXTENSION

Sales Navigator Capture Extension

Export Sales Nav leads natively — no copy-paste, no API keys.

A Manifest V3 Chrome extension that **intercepts Sales Navigator's own API responses** in the page (patching `fetch` / `XHR` from the page world), passively captures and de-duplicates leads by `profileId`, auto-paginates, and exports to CSV / JSON or pushes to a webhook. Runs entirely on the user's session — no build step.

17K+ contacts captured / dedup by profileId / CSV • JSON • webhook

The capture panel mid-run: leads accrue passively as you browse, with live counts for **leads captured** and **pages auto-paginated**. One-click **CSV / JSON export**, an optional **webhook** to push leads into a pipeline, and tunable pagination delay + jitter to pace requests.

// the actual extension UI, rendered from `src/popup/`

► **evidence** — the shipped extension's popup, real UI (not a mockup)

COMPETITOR-CUSTOMER DISCOVERY

Customer Poacher

Point it at a company; surface its customers' decision-makers.

A terminal-run **Mastra workflow** that turns one company URL into a list of *their* customers' buyers: **crawl the sitemap → AI-filter case-study URLs → scrape via Zyte → extract named people → resolve LinkedIn profiles via Serper → export CSV**. Run it on a competitor and you get a poaching list — real exports exist for 130+ companies (gong.io, seismic, dynatrace, connectwise...).

130+ companies mined / sitemap → AI → LinkedIn / CSV exports

out/gong-io-customer-linkedin-profiles.csv → LinkedIn profiles				
NAME	COMPANY	JOB TITLE	LINKEDIN	SOURCE
Alison Silver	Brex	Director, Client Sales	/in/alison-silver-4a81...	gong.io
Courtney Tucci	Mirakl	Director of Sales Enablement	/in/courtneytucci	gong.io
Kevin Jordan	Anthropic	GTM Enablement Lead	/in/kevindjordan	gong.io
Vineet Ratan	Rippling	Team Lead, Implementation	resolving...	gong.io

► **evidence** — real CSV output: a company's customers, resolved to LinkedIn profiles

SEGMENTATION

Lead Bucketing Agent

Auto-segmenting a flat lead list into outreach-ready niches.

A **Claude Agent SDK** agent that researches each lead with live Google search and classifies it into a niche — a **two-phase pass** (broad → deep) that took a **1,255-row lead list down to 116 unique companies across 8 broad and 109 granular niches**, emitting a written report and bucketed CSVs so generic blasts become segment-specific campaigns.

1,255 leads → 116 cos / 109 granular niches / 3K+ companies segmented

► evidence — generated report: the agent's own niche breakdown of the lead list

SECURITY RECON

Auth-Enumeration Recon Agent

An agent that probes auth flows the way a researcher would.

A two-phase autonomous agent for detecting account-enumeration leaks. **Phase 1** (TS / Mastra) discovers auth pages and mines customer identities from case-study pages; **Phase 2** (Python / `claude_agent_sdk`) drives a browser through login, signup, SSO and API flows, **diffs responses and HAR traffic** to spot enumeration, solves CAPTCHAs, and persists novel patterns across a long agent loop with 10 MCP tools. Confirmed findings across 30+ real companies.

10 MCP tools / HAR-diff analysis / findings on 30+ companies

agent.log → report.md

```
[AUTH] phase 1b: scraping login page → https://app-auth.<target>.com/login
[SCRAPER] done: "Customer Case Study" (8013 chars, 3232ms)
[AGENT] baseline fake email → fakeuser_...@nonexistent-testdomain.com
[AGENT] analyze_page → interact_with_page → parse_har_diff
[AGENT] real emails bypass CAPTCHA via server-side redirect (differential)
```

```
— report.md —
verdict: ENUMERABLE      method: api_response_diff
pages tested: 3 · non-SSO findings: 3 · confidence: high
```

► **evidence** — real agent run → verdict (target anonymized, identities redacted)

■ Competitor Recon Agent

Maps a niche's competitive landscape — named competitors, funded startups, comparison pages — from one target.

→ 100+ companies mapped · 15+ competitors each

Claude Agent SDK · Google SERP · proxy

■ Employee Intelligence DB

MongoDB tracking employees at target accounts with first/last-seen + status — for hiring / churn triggers.

→ 3 target accounts · daily deltas

MongoDB · schema-driven snapshots

■ Shopify Merchant Classifier

Agent that discovers & classifies Shopify stores and agencies from search results for outreach.

→ 2,029 stores classified

Claude Agent SDK · Apify · Cheerio

■ Crunchbase Exporter

Resumable batch scraper for funded-company data with progress checkpointing and recovery.

→ 25,200 funded companies exported

Playwright · resumable state

■ Smartlead Campaign Agent

CLI agent that creates and manages outbound campaigns through the Smartlead API.

→ full campaign lifecycle via API

Claude Agent SDK · Smartlead API

■ Email Finder TUI

Interactive terminal tool for name+-company email lookup via LeadMagic, with a live blessed UI.

→ name + company → verified email

Node · blessed · LeadMagic

■ Apollo Headcount Lookup

Rate-limited CLI resolving company headcount from Apollo for domains or names, streamed to CSV.

→ domain / name → headcount

TypeScript · Apollo · streaming CSV

■ Post-Engagement Scraper

Exports everyone who commented on a target LinkedIn post — warm signals for outreach.

→ 1,210 commenters / post

Node · Apify
